

Media Fill Test: Concrete Implementation ?

Introduction

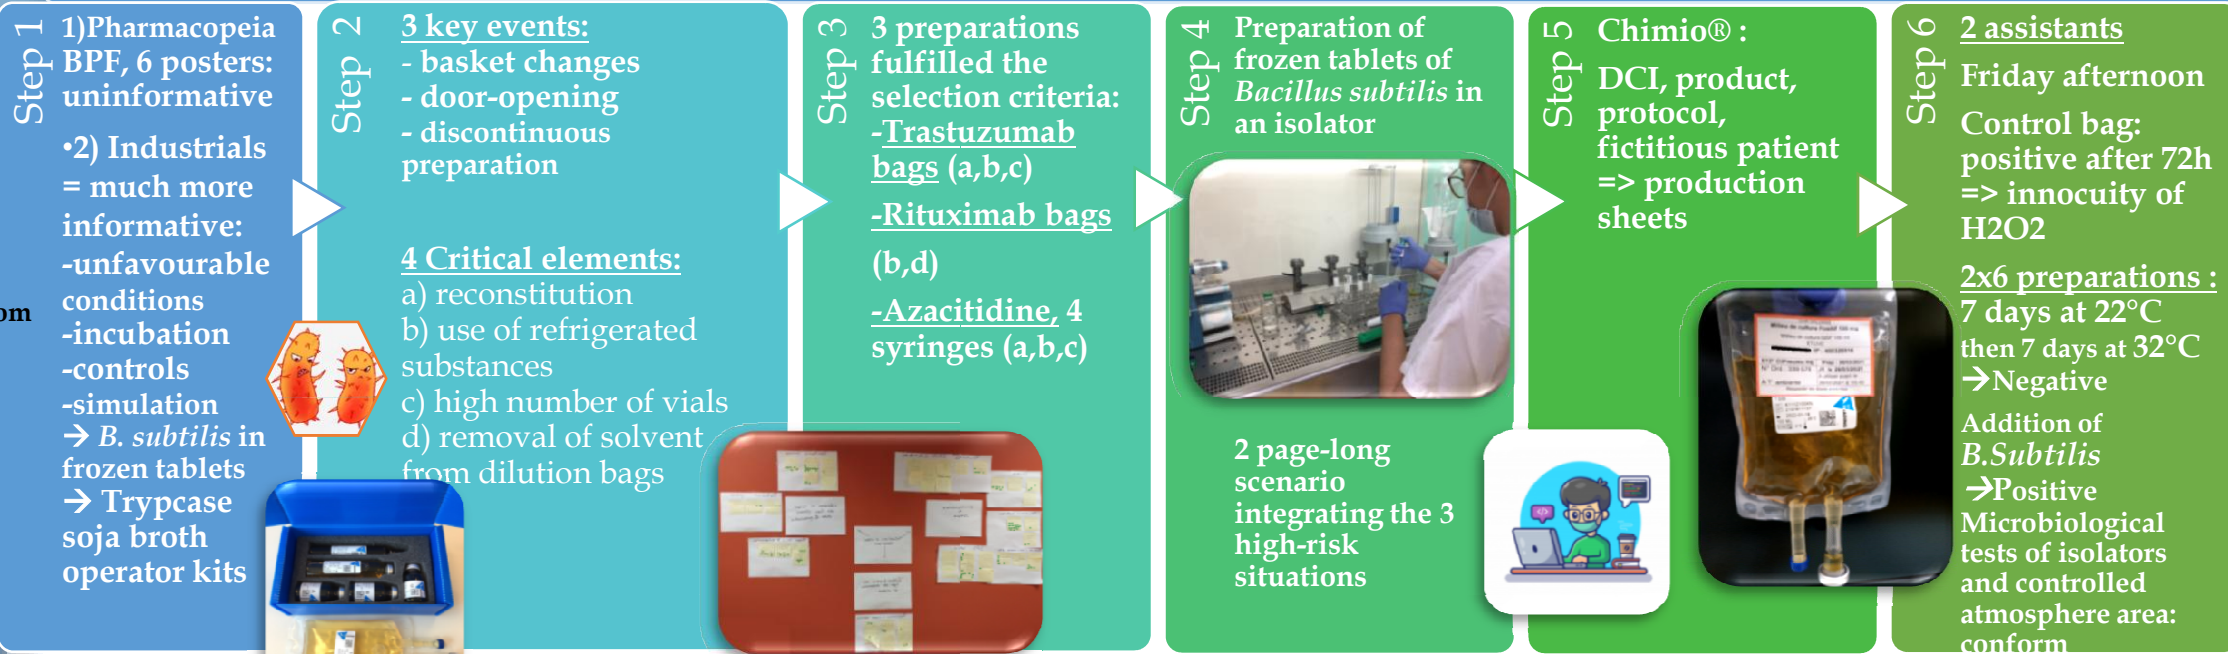

2019 Best Practice Guidelines Project: qualification of pharmaceutical assistants = successful completion of a media fill test. How?

Objective → A reproducible protocol feasible in a hospital isolator

Material and Methods

Results

Discussion/Conclusion

To simulate the procedure for a lower cost, the kit was adapted (use of the dilution bag for reconstitution).

Problems : glass ampuls were difficult to break. Addition of *B. subtilis* → lab technician. Incubation → room in oven.

Our media fill test attempt fulfilled expectations. Duration: 4 months for qualification of 10 assistants. Feasible for a **yearly cost of 4800€** (with only 2 Azacitidine syringes each, however). **Routinely performing the test 3 times per person would allow adequate qualification!**
