## INTRODUCTION

**More than one in two healthcare centers (HC)** has already experienced an unscheduled interruptions in its cancer treatment preparation activities.

Most common causes :

**How can we ensure continuity in preparation activities? Mutual assistance between HC ?**

Aim : identify the human, material, and organizational resources that each HC could mobilize.

## METHOD

### Google Forms® Survey

All pharmacists in charge of a Centralized Chemotherapy Preparation Unit (CCPU)

HC: public or private

75 questions

### Seven sections

- Equipment
- HR
- Production capacity
- Subcontracting
- Cessation of activity
- Continuity plan
- Regulatory framework

Each HC had **15 days** to answer.

## RESULTS

Response rate : **18 out of 21** respondents

*Equipments of the 18 HC*

	Trained staff	Pharmacists	Technicians
Total		88	190
Needed daily		20	69
Technically available		68	121

### 58 workstations

The main limiting factor is the lack of staff.

Requested assistance :  
**access to external premises**

Help offered:  
**outsourcing preparations**  
(fixed doses in series)  
*BUT* : only by increasing the number of hours and technicians

## CONCLUSION

**Numerous and varied** territorial resources.

BUT : **discrepancy between the resources** that can theoretically be mobilized **and the perceptions** of professionals in their daily practice.

Ultimately : implementation of a regional cooperation strategy (standard assistance agreement)  
Necessity of a regulatory changes to provide a legal framework for mutual assistance between HC.
